

1. A collectibles display case comprising
 - a box accessible through a door that covers a box front, and
 - a first plurality of laterally spaced apart fingers near a box bottom and extending a short distance toward the door from a back opposite the door, adapted to removably receive a base on which a collectible is mounted, releasably securing the base between one or more fingers and the base bottom with each collectible freestanding in noncontact with the box or another object.
2. The collectibles display case of claim 1 further comprising a second plurality of laterally spaced apart fingers near a box top and extending a short distance toward the door from the back opposite the door, also adapted to removably receive a base on which a collectible is mounted, releasably securing the base between one or more fingers and the base top with each collectible freestanding in noncontact with the box or another object.
3. The collectibles display case of claim 2 wherein said first and second pluralities of laterally spaced apart fingers are disposed in the box to receive bases on which collectibles are respectively mounted such that collectibles extending into the box from their bases secured at the box bottom alternate with collectibles extending into the box from their bases secured at the box top with each collectible freestanding in noncontact with another collectible.
4. The collectibles display case of claim 1 wherein the door is transparent.
5. The collectibles display case of claim 1 further comprising a wall-mounting fastener on the case back.

- 2 6. The collectibles display case of claim 1 wherein the case is hand-carried with a
 carrying handle on the top.
- 4 7. The collectibles display case of claim 1 comprising a first such case stacked on
 top of a second such case with fasteners releasably interconnecting the two cases.
- 6 8. The collectibles display case of claim 7 further comprising a third such case on
 which the first and second cases are stacked with fasteners releasably
 interconnecting the adjoining cases.
- 8 9. The collectibles display case of claim 1 comprising a first such case alongside a
 second such case with fasteners releasably interconnecting the two cases.
- 10 10. The collectibles display case of claim 9 wherein the two cases are fastened
 together with the respective doors opposing.
- 12 11. The collectibles display case of claim 9 wherein the two cases are fastened
 together with the respective backs opposing.
- 14 12. The collectibles display case of claim 9 further comprising additional such cases
 stacked on top of said first and second cases with fasteners releasably
16 interconnecting the stacked cases comprising a set of four interconnected cases.
- 18 13. The collectibles display case of claim 12 further comprising additional such cases
 stacked on top of said set of four interconnected cases with fasteners releasably
 interconnecting the stacked cases comprising a set of six interconnected cases.
- 20 14. The collectibles display case of claim 13 further comprising additional such cases
 stacked on top of said set of four interconnected cases with fasteners releasably
22 interconnecting the stacked cases comprising a set of six interconnected cases.

15. The collectibles display case of claim 14 further comprising a first such cases set

2 of six interconnected cases alongside a second such set of six interconnected cases
with fasteners releasably interconnecting the cases comprising a set of twelve
4 interconnected cases.

16. The collectibles display case of claim 14 further comprising a removable and

6 adjustable carrying handle on the case top such that all case carrying handles are
removable for ease of box stacking except a single carrying handle adjusted to
8 span between boxes.

17. The collectibles display case of claim 16 further comprising

10 a first pair of raised tubes disposed longitudinally with the box,
a second pair raised tubes disposed transversely with the box,

12 wherein the handle fits in a matching pair of raised first tubes aligned

longitudinally with the box in transporting a single case, and wherein when two cases are

14 combined back-to-back, a single handle is oriented transversely between the boxes with a
first handle portion fitting in a front member of the transverse pair of raised tubes in a

16 first case and with a second handle portion fitting in a front member of the transverse pair
of raised tubes in a second case and similarly, when two cases are combined front-to-

18 front, a single handle is oriented transversely between the boxes with a first handle
portion fitting in a back member of the transverse pair of raised tubes in a first case and

20 with a second handle portion fitting in a back member of the transverse pair of raised
tubes in a second case.

22 18. The collectibles display case of claim 1 further comprising

a front first side fastener half on a box first side extending forward of the box
2 front outside of the door, and
a front second side fastener half matching the front first side fastener half, the
4 front second side fastener half on a box second side opposing the first side
such that as two such cases are brought together with fronts opposing, front
6 first and second side fastener halves of the two cases mutually engage on each
side.

8 19. The collectibles display case of claim 18 wherein
the front first side fastener half comprises a vertical hinge bar, and
10 the front second side fastener half comprises upper and lower side fastener
members each with a channel adapted to receive the hinge bar.

12 20. The collectibles display case of claim 19 the front second side fastener half
comprises a hook plate with a hook on its distal end between the upper and lower
14 side fastener members disposed to engage around the hinge bar as the hinge bar
enters the channels.

16 21. The collectibles display case of claim 20 wherein the hook plate attaches
intermediate the box second side with flexure allowing it to facilitate engagement
18 and disengagement of the hinge bar as the hinge bar pushes the hook plate
laterally as the hinge bar moves into the channels, the hook plate flexing to allow
20 the hinge bar to pass and then springing back into engagement around it when the
it is in within the channels.

22 22. The collectibles display of claim 1 further comprising a back first side fastener
half on a box first side extending rearward from the box back, and

a back second side fastener half matching the back first side fastener half, the
2 back second side fastener half on a box second side opposing the first side
such that as two such cases are brought together with backs opposing, back
4 first and second side fastener halves of the two cases mutually engage on each
side.

6 23. The collectibles display case of claim 22 wherein
the back first side fastener half comprises a vertical catch plate with a hook on a
8 distal end attached with flexure to the back first side, and
the back second side fastener half comprises a slot in the back second side
10 adapted to receive a catch plate with the catch plate hook releasably engaging
the back inside the box.

12 24. The collectibles display case of claim 23 wherein the catch plate extends from the
back first side through a window in the back such that as two such cases are
14 brought together with backs opposing, on each side the hook catch plate extends
through the window into engagement in the slot without obstructing the box backs
16 from coming into near face-to-face contact.

25. The collectibles display case of claim 1 further comprising a first plurality of feet
18 depending downward from the bottom on which the case stands.

26. The collectibles display case of claim 25 further comprising
20 two eyes extending upward from the box back above the top each on flexible legs,
and
22 two of said plurality of feet each also including a foot portion extending rearward
of the box laterally disposed such that such that as an upper case is brought

into stacked relation on a lower case with backs aligned, each foot portion
extending rearward of an upper case urges the eye of the lower case outward
of the box on the flexible legs until the foot portion extending rearward passes
into the eye, the eye resiliently returning from its flex position therein
releasably securing the cases together.

27. The collectibles display case of claim 26 wherein when said upper and lower
cases are instead brought into back to back relation, said eyes are adjacent so as to
not engage each other and said two of said plurality of feet are similarly adjacent.

28. The collectibles display case of claim 1 further comprising
a ring extending upward from the top at the front,
a step depending downward from the bottom at the front and matching the ring,
aligned such that as two such cases are brought together in stacked relation
with fronts aligned, the step fits under the ring of the two cases mutually
engaging the cases with the ring of one case hanging from the step of the other
case.

29. A collectibles display case comprising
a box accessible through a door that covers a door front, and
a first plurality of laterally spaced apart fingers near a box bottom and extending a
short distance toward the door from a back opposite the door, adapted to
removably receive a base on which a collectible is mounted, releasably
securing the base between one or more fingers and the base bottom with each
collectible freestanding in noncontact with the box or another object,

a second plurality of laterally spaced apart fingers near a box top and extending a

2 short distance toward the door from the back opposite the door, also adapted

to removably receive a base on which a collectible is mounted, releasably

4 securing the base between one or more fingers and the base top with each

collectible freestanding in noncontact with the box or another object,

6 wherein said first and second pluralities of laterally spaced apart fingers are

disposed in the box to receive bases on which collectibles are respectively

8 mounted such that collectibles extending into the box from their bases secured

at the box bottom alternate with collectibles extending into the box from their

10 bases secured at the box top with each collectible freestanding in noncontact

with another collectible,

12 wherein the box with fingers is stackable with a first box stackable on top of a

second box with fasteners releasably interconnecting the two boxes,

14 and wherein a first such box is attachable alongside a second such case with

fasteners releasably interconnecting the cases alongside, either front to front

16 or back to back,

a removable and adjustable carrying handle on each box such that all box carrying

18 handles are removable for ease of box stacking except a single carrying handle

adjusted to span between boxes mutually attached boxes.

20 30. The collectibles display case of claim 29 further comprising

a front first side fastener half on a box first side extending forward from the box

22 front outside of the door, and

a front second side fastener half matching the front first side fastener half, the
2 front second side fastener half on a box second side opposing the first side
such that as two such cases are brought together with fronts opposing, front
4 first and second side fastener halves of the two cases mutually engage on each
side.

6 wherein

the front first side fastener half comprises a vertical hinge bar, and

8 the front second side fastener half comprises upper and lower side fastener

members each with a channel adapted to receive the hinge bar, wherein the
10 hook plate attaches intermediate the box second side with flexure allowing it
to facilitate engagement and disengagement of the hinge bar as the hinge bar
12 pushes the hook plate laterally as the hinge bar moves into the channels, the
hook plate flexing to allow the hinge bar to pass and then springing back into
14 engagement around it when the it is in within the channels

and wherein

16 the front second side fastener half comprises a hook plate with a hook on its distal
end between the upper and lower side fastener members disposed to engage
18 around the hinge bar as the hinge bar enters the channels.

31. The collectibles display of claim 29 further comprising

20 a back first side fastener half on a box first side extending rearward from the box
back, and

22 a back second side fastener half matching the back first side fastener half, the
back second side fastener half on a box second side opposing the first side

such that as two such cases are brought together with backs opposing, back
2 first and second side fastener halves of the two cases mutually engage on each
side,
4 wherein
the back first side fastener half comprises a vertical catch plate with a hook on a
6 distal end attached with flexure to the back first side, and
the back second side fastener half comprises a slot in the back second side
8 adapted to receive a catch plate with the catch plate hook releasably engaging
the back inside the box,
10 and wherein the catch plate extends from the back first side through a window in
the back such that as two such cases are brought together with backs
12 opposing, on each side the hook catch plate extends through the window into
engagement in the slot without obstructing the box backs from coming into
14 near face-to-face contact.

32. The collectibles display case of claim 29 further comprising
16 a first plurality of feet depending downward from the bottom on which the case
stands, two of said plurality of feet each also including a foot portion
18 extending rearward of the box laterally disposed such that such that as an
upper case is brought into stacked relation on a lower case with backs aligned,
20 each foot portion extending rearward of an upper case urges the eye of the
lower case outward of the box on the flexible legs until the foot portion
22 extending rearward passes into the eye, the eye resiliently returning from its
flex position therein releasably securing the cases together, and

two eyes extending upward from the box back above the top each on flexible legs,
2 and
wherein when said upper and lower cases are instead brought into back to back
4 relation, said eyes are adjacent so as to not engage each other and said two of
said plurality of feet are similarly adjacent,
6 a ring extending upward from the top at the front,
a step depending downward from the bottom at the front and matching the ring,
8 aligned such that as two such cases are brought together in stacked relation
with fronts aligned, the step fits under the ring of the two cases mutually
10 engaging the cases with the ring of one case hanging from the step of the other
case.

12 33. A collectibles display case comprising

a box accessible through a door that covers a door front, and
14 a first plurality of laterally spaced apart fingers near a box bottom and extending a
short distance toward the door from a back opposite the door, adapted to
16 removably receive a base on which a collectible is mounted, releasably
securing the base between one or more fingers and the base bottom with each
18 collectible freestanding in noncontact with the box or another object,
a second plurality of laterally spaced apart fingers near a box top and extending a
20 short distance toward the door from the back opposite the door, also adapted
to removably receive a base on which a collectible is mounted, releasably
22 securing the base between one or more fingers and the base top with each
collectible freestanding in noncontact with the box or another object,

wherein said first and second pluralities of laterally spaced apart fingers are
2 disposed in the box to receive bases on which collectibles are respectively
mounted such that collectibles extending into the box from their bases secured
4 at the box bottom alternate with collectibles extending into the box from their
bases secured at the box top with each collectible freestanding in noncontact
6 with another collectible,

wherein the box with fingers is stackable with a first box stackable on top of a
8 second box with fasteners releasably interconnecting the two boxes,

and wherein a first such box is attachable alongside a second such case with
10 fasteners releasably interconnecting the cases alongside, either front to front or back
to back,

12 a removable and adjustable carrying handle on each box such that all box carrying
handles are removable for ease of box stacking except a single carrying handle
14 adjusted to span between boxes mutually attached boxes.

a front first side fastener half on a box first side extending forward from the box
16 front outside of the door, and

a front second side fastener half matching the front first side fastener half, the
18 front second side fastener half on a box second side opposing the first side
such that as two such cases are brought together with fronts opposing, front
20 first and second side fastener halves of the two cases mutually engage on each
side.

22 wherein

the front first side fastener half comprises a vertical hinge bar, and

the front second side fastener half comprises upper and lower side fastener

2 members each with a channel adapted to receive the hinge bar, wherein the
hook plate attaches intermediate the box second side with flexure allowing it
4 to facilitate engagement and disengagement of the hinge bar as the hinge bar
pushes the hook plate laterally as the hinge bar moves into the channels, the
6 hook plate flexing to allow the hinge bar to pass and then springing back into
engagement around it when the it is in within the channels

8 and wherein

the front second side fastener half comprises a hook plate with a hook on its distal
10 end between the upper and lower side fastener members disposed to engage
around the hinge bar as the hinge bar enters the channels,

12 a back first side fastener half on a box first side extending rearward from the box
back, and

14 a back second side fastener half matching the back first side fastener half, the
back second side fastener half on a box second side opposing the first side
16 such that as two such cases are brought together with backs opposing, back
first and second side fastener halves of the two cases mutually engage on each
18 side,

wherein

20 the back first side fastener half comprises a vertical catch plate with a hook on a
distal end attached with flexure to the back first side, and

the back second side fastener half comprises a slot in the back second side
2 adapted to receive a catch plate with the catch plate hook releasably engaging
the back inside the box,
4 and wherein the catch plate extends from the back first side through a window in
the back such that as two such cases are brought together with backs
6 opposing, on each side the hook catch plate extends through the window into
engagement in the slot without obstructing the box backs from coming into
8 near face-to-face contact.

a first plurality of feet depending downward from the bottom on which the case
10 stands, two of said plurality of feet each also including a foot portion
extending rearward of the box laterally disposed such that such that as an
12 upper case is brought into stacked relation on a lower case with backs aligned,
each foot portion extending rearward of an upper case urges the eye of the
14 lower case outward of the box on the flexible legs until the foot portion
extending rearward passes into the eye, the eye resiliently returning from its
16 flex position therein releasably securing the cases together, and
two eyes extending upward from the box back above the top each on flexible legs,
18 and
wherein when said upper and lower cases are instead brought into back to back
20 relation, said eyes are adjacent so as to not engage each other and said two of
said plurality of feet are similarly adjacent,
22 a ring extending upward from the top at the front,

a step depending downward from the bottom at the front and matching the ring,
2 aligned such that as two such cases are brought together in stacked relation
with fronts aligned, the step fits under the ring of the two cases mutually
4 engaging the cases with the ring of one case hanging from the step of the other
case.
6
